

## CHILDHOOD IMMUNIZATION STATUS

The measure includes the number of children who turned 2 years old during the measurement year and who were continuously enrolled in Louisiana Medicaid during the measurement year. The rate (percentage) shows how many of these children received all the immunizations in Combination 2 or Combination 3 by their second birthdays.\*

Combination 2 includes:

Four doses DTP or DTaP; Three doses IPV; One dose MMR; Three doses Hib (HEDIS® reduced the 2008 and 2009 requirements to two doses due to vaccine shortage); three doses hepatitis B; One dose VZV (chickenpox)

Combination 3 includes:

Combination 2, plus four doses pneumococcal conjugate

\*Rates shown are for Medicaid-only recipients (dual-eligible recipients are excluded)

NOTE: Rates shown above are based on calculations utilizing only immunization claims paid by Louisiana Medicaid and may differ from calculations/data from the Louisiana Immunization Network for Kids Statewide (LINKS) immunization registry.
