John Bel Edwards
GOVERNOR

Rebekah E. Gee MD, MPH
SECRETARY

State of Louisiana

Department of Health and Hospitals
Office of Public Health

January 29, 2016

The Honorable Fred H. Mills, Jr., Chairman
Senate Health and Welfare Committee
P.O. Box 94183, Capitol Station
Baton Rouge, LA 70804

The Honorable Frank A. Hoffman, Chairman
House Health and Welfare Committee
P.O. Box 94062, Capitol Station
Baton Rouge, LA 70804

Dear Chairman Mills and Chairman Hoffman:

Pursuant to ACT 573 of the 2014 Legislative Session, the Department of Health and Hospitals submits the following Annual Report as to the state of public water systems across Louisiana.

This report was prepared using the monthly compliance data submitted to the Louisiana Department of Health and Hospitals (LDHH). State and Federal Drinking Water Regulations require public water systems to provide continuous disinfection of drinking water and to measure and report the disinfectant (chlorine) levels on a monthly basis.

In response to three deaths caused by the "brain-eating amoeba", *Naegleria fowleri*, that were associated with the public drinking water in two parishes, the Louisiana Department of Health and Hospitals issued an Emergency Rule on November 6, 2013 requiring public water systems to maintain a higher disinfectant (chlorine) residual level in their distributions systems and increase their number of sampling sites by 25 percent for monitoring of the disinfectant residual in the distribution system each month. Most public water systems in Louisiana were required to meet this new higher standard by February 1, 2014. The Emergency Rule is still in effect as a result of subsequent re-promulgation.

Prior to the Emergency Rule, Louisiana's regulations, which were implemented in 1995 in accordance with federal guidance, stipulated that drinking water systems were required to maintain only a "trace" or "detectable" level of total chlorine residual at all points in their system at all times. Under the Emergency Rule, public water systems must have a minimum disinfectant residual level of 0.5 milligrams per liter (mg/l) at all points in their distribution system and finished water storage facilities at all times. This 0.5 mg/l level is known to control the *Naegleria fowleri* amoeba.

The Emergency Rule is based on scientific data, response protocols from Western Australia, and recommendations from the federal Centers for Disease Control and Prevention (CDC) relative to

the control of the *Naegleria fowleri* amoeba. LDHH has convened a Scientific Workgroup of national and international experts to discuss the *Naegleria fowleri* amoeba concerns regarding Louisiana's public water systems and drinking water disinfection regulations. In accordance with the intent of Act 573 of 2014 and HCR 54 of 2015, the state health officer, through DHH-OPH, published a "notice of intent" rule in the December 20, 2015 Louisiana Register to finalize the requirements of the Emergency Rule (the "ER") concerning disinfection of public water systems. The proposed rule maintains the ER's required minimum disinfection residual level of 0.5 milligrams per liter (mg/L) for public water systems.

There are currently 1,349 public drinking water systems (PWS) in the state of Louisiana. Public water systems that reported at least one chlorine residual level below 0.5 mg/L in a month were cited a monthly chlorine residual violation for non-compliance with the Emergency Rule. Also, public water systems were cited a monthly monitoring/reporting violation for failing to monitor and/or report the chlorine residual level in their drinking water. Below are some statistics on the public water system compliance with the Emergency Rule on water disinfection for the period of January 1, 2015 through December 31, 2015:

- 1,247 public water systems (93%) were compliant with the minimum chlorine level for the entire year.
- 1,142 public water systems (85% of all systems) were compliant by monitoring and meeting the minimum chlorine level of 0.5 mg/L for the entire year.
- 94 public water systems (7%) were non-compliant by failing to meet the minimum chlorine level of 0.5 mg/L for at least one month during the year.
    - Of the 94, 65 public water systems failed to meet the minimum chlorine level for only 1 month in the year.
    - Of the 94, one (1) public water system failed to meet the minimum chlorine level for all 12 months.
- 116 public water systems (9%) were non-compliant by failing to monitor/report the chlorine level in the drinking water for at least one month for the entire year.
- Eight (8) public water systems that have potable water distribution piping comingled with onsite industrial processes retained their disinfection waiver and notify water system users of the risk in lieu of implementing disinfection.

The attached table provides the number of monthly chlorine residual (CR) violations and the number of monthly chlorine monitoring/reporting (MR) violations for the compliance period of January 1, 2015 through December 31, 2015 for each Louisiana public water systems.

Should you have any questions regarding the information contained in this correspondence, please do not hesitate to contact my office at 225-342-7092.

Sincerely,

Jimmy Guidry, M.D.
State Health Officer

cc: Senator Jean-Paul Morrell

DEPARTMENT OF HEALTH
AND HOSPITALS

2015 Annual Report on Water Disinfection - Act 573 of 2014
